https://github.com/RoseReyes/RestaurantAndRatings

- Individual project with full front and back-end functionalities.
- **Key Responsibility:** Login and Registration page with validation with password encryption, User can add reviews to specific restaurants/ratings. Reviews history page
- **Tools:** C#, ASP.NET Core, Entity, MySQL, Bootstrap4

EXPERIENCE

Certificate of Achievement - Highest Accomplishment | Coding Dojo

Full Stack Developer, Feb 2018- May 2018

- Completed an intensive full-time web development program for more than 1000+ hours.
- Scored 90% in C#, 95% in Python, and 100% in MEAN Stack exams which is to develop full CRUD wireframe applications within 4 hours.
- Completed small to large scale wireframe replica of widely used applications such as E-commerce, Facebook, Expedia, Meetup and the like.
- Team player - Collaborated with other cohorts either via project week development or algorithm white-boarding.
- Able to assist other cohorts with queries or cla͟n lab activity.

GCI (General Communications Inc.) | Anchorage, **Business Analyst, Sep 2016 - Oct 2017**

- Developed Dashboards to monitor SIT and End͟hich resulted in quick escalation and resolution of tasks assigned to each team members.
- Implemented logic for the data migration business transformation rules that were determined only during the testing activity. As a result, Testing turn-around time and completion progressed from 50% to 90%.
- Serve as a liaison between business constituents and the service provisioning team. It helped the technical team, developers and project manager to have a clear communication especially if changes on the application was requested by the business and vice-versa.

WeSupport Inc. | Manila, PH **Business Analyst, May 2013 - May 2015**

- Applied prompt determination of corrective actions and comprehensive follow-up with the application being supported. The willingness to use the system by the clients improved by 85% vs 70% upon initial implementation.
- Developed scheduled job process to capture data in legacy system to identify fault tickets. It allowed Logistics Coordinators, Supervisors, and CSZ Heads identify bottlenecks and prevented unnecessary escalation and SLA penalty of their contractors.
- Developed system business process which decreased the contractor's sub-standard inspection and recurring customer complaints by 25% from the constant rate of 40%.
- Implemented the business process of required CPE / materials stock once inventory replenishment was needed. This resulted in quicker dispatch of contractors in repair of Alpha and SME customers nationwide.
